Reasons to work with me

Nottingham NG11 8NS

imbarisburak_buisiness@protonmail.com

7835947563

I am 21 years old, rather a lot equipped about my branch. I can learn anything needed rapidly and can adapt my transferable skills to any situation. Therefore, I perform well organized and carry out my works with a forward view. For me it is important to have a problem solver mind set, therefore I always focus on solutions rather than problems while expecting each and every type of complication. Towards all those attributes I developed and serve, the company and the team I work with will have productive progress with me.

Education

Bachelor's in Computer System (Cyber Security)

The Nottingham Trent University - Nottingham

September 2019 to September 2023

Skills

- Linux (3 years)
- It Security (3 years)
- Network Security (3 years)
- Siem
- Information Security (3 years)
- Comptia
- Java (Less than 1 year)
- Python (3 years)
- C (2 years)
- C++ (3 years)
- Burp Suite (3 years)
- Assembly (Less than 1 year)
- Web Pentesting
- Privelege Escelation (3 years)
- Microsoft Office (9 years)
- Operating systems (3 years)
- Arch Linux (1 year)
- Advanced Networking (3 years)
- Network administration (Less than 1 year)
- Reverse Engineering (Less than 1 year)

- Cybersecurity (3 years)
- Shell Scripting (3 years)
- Wordpre (Less than 1 year)

Additional Information

I have my expertises spread on quite large scale and can deal with anything IT specific. However, I can label myself as a penetration tester, therefore I enhanced my knowledge around it. I can manage and guarantee your tangible, also intangible assets's information security. I can produce reports crafted with finesse for every possible attack your assets could experience. Furthermore I provide and implement security solutions to those vulnerabilities by conducting enhanced scans and tests with Burp Suite, OpenVAS and Nessus to your services and web applications to see possible attack vectors. In addition can manually conduct in-depth tests on your systems whether they are vulnerable to any kind of privelege escalation or not.
